WORK EXPERIENCE

Goldman Sachs

Aug 2025 – Present

Analyst Software Engineer

Salt Lake City, UT

- Resolved daily production disk-exhaustion on mmap-backed trade ingestion stores via sparse-file hole-punching fallocation with inode-safe flush sequencing, reducing on-disk footprint by 80%+ and eliminating daily ops pages.
- Hardened instance failover by aligning mmap write semantics with downstream consumers, eliminating hole-punch vs. reader race conditions under concurrent load.

D2Sol Inc

Apr 2025 – Aug 2025

Java Developer

Durham, NC

- Improved system performance and maintainability by refactoring legacy modules and streamlining scheduled backend jobs, reducing job runtime and retiring meaningful technical debt across the service tier.
- Built real-time Splunk exception-monitoring dashboards with keyword/severity-driven on-call alerts (NPE, timeouts, 5xx), cutting mean-time-to-detect from hours to under 2 minutes and enabling proactive incident response.

LevyLab

Feb 2023 - Nov 2023

Software Engineer

Pittsburgh, PA

- Engineered an automated Extract, Transform, and Load(ETL) pipeline using n8n to extract time-series data from Excel files in Google Drive and load into PostgreSQL, processing 17,000+ records daily.
- Developed a Java-based software pipeline for lab inventory management, enabling seamless tracking from QR code scanning to exporting product details in CSV format for improved efficiency.
- Enhanced an existing Android application by implementing Single Sign-On (SSO) integration with the Asana API to facilitate secure and streamlined team-specific authorization for LevyLab.

Hexagon Capability Center India

Jan 2021 – Nov 2022

Software Engineer

Hyderabad, India

- Refactored backend services via algorithm and data-structure optimization, improving runtime by 25%+ and cutting CPU/memory/disk I/O by 13%+.
- Architected Timesheet web app for 300+ contract employees, cutting processing time by 30% via workflow automation.
- Engineered horizontally scalable mobile app on XALT (microservices) with admin portal, serving 2,500+ employees.
- Built web app rendering organizational hierarchy and employee details from a remote DB, managing 30,000+ records.
- Implemented MSAL-based SSO across Angular apps, removing VPN requirement and driving a 40%+ usage increase.

TECHNICAL SKILLS

Languages: Java, Python, Go, C++, C#, JavaScript/TypeScript

Backend & Distributed Systems: Kafka, gRPC, REST, Microservices, Spring, .NET Core, Linux

Cloud & DevOps: AWS (S3, EC2, Lambda, DynamoDB), GCP, Azure, Docker, Kubernetes, Git

Databases: PostgreSQL, MySQL, MongoDB, Redis, Cassandra

Frontend: React, Angular, TailwindCSS

PROJECTS

SCI-GSO Website

Jul 2024 – Aug 2024

Skills: ReactJS, Framer-motion, Node.js, MySQL

[link](#)

- Test my git pipeline
- Built and deployed full-stack web app for SCI with React frontend and Node.js/MySQL backend, serving 1,200+ users across devices.

MLDeployX

Mar 2024 – Apr 2024

Skills: C#, Python, HTML, CSS, JavaScript, Vertex AI, MySQL, Kubernetes, Docker

[Github link](#)

- Built cloud-native ML serving platform on GCP letting users deploy custom models via web app, with Docker/Kubernetes orchestration, HPA auto-scaling, and serverless inference for low-latency real-time predictions.

Group Chat System

Feb 2023 – Apr 2023

Skills: Bi-directional streaming, Protocol Buffers, Docker, Go, gRPC

[Github link](#)

- Built distributed group chat system in Go with gRPC bi-directional streaming and Protocol Buffers, maintaining data consistency across 5 replicated servers.

EDUCATION

University of Pittsburgh	Jan 2023 - Dec 2024
Master of Science in Computer Science	Pittsburgh, PA
Indian Institute of Technology, Dhanbad	Jul 2015 - May 2019
Bachelor of Technology in Computer Science and Engineering	Dhanbad, India
